Un modèle simple comme j'aime, plié à partir de la base du cerf-volant (kite base). Pour ce modèle je vous conseille un papier bicolore et de 15 cm. On peut aussi prendre d'autre point de référence pour modifier sa morphologie. Bon pliage

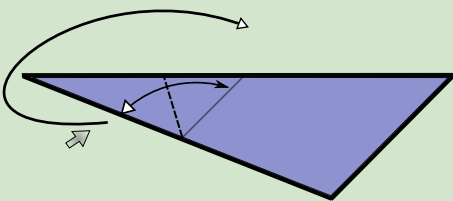

1. Fold/unfold center line. Pinch fold to mark center point.

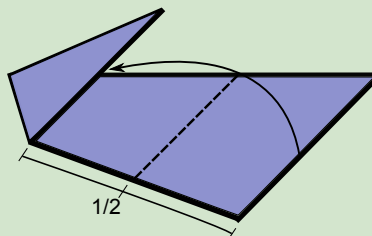

2. Fold sides to center line - kite base. Turn the model 90°

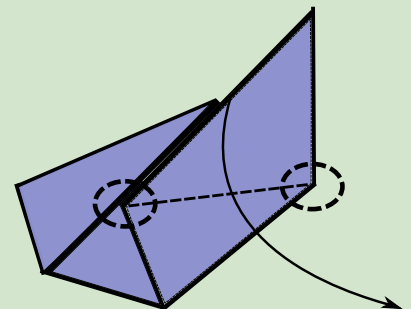

3. Fold the model in half.

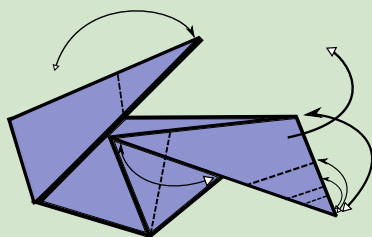

4. Fold/unfold along existing crease. Do an outside reverse to form the tail.

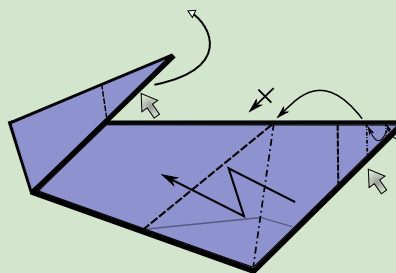

5. Fold/unfold top section in half.

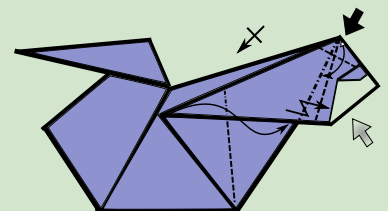

6. Fold down along corner tips as marked.

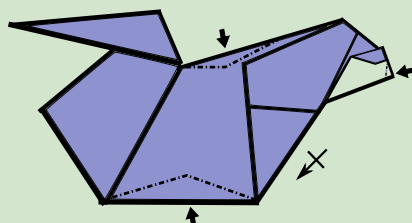

7. Fold/unfold tail, body and head as marked. Pull up right tip to return to step 5 position.

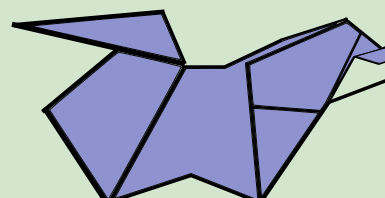

8. Use all creases made in Step 7. Out side reverse fold the tail, crimp body on both sides and roll fold the mouth.

9. Fold both arms inside using existing creases. Fold/unfold neck and head section. Sink fold the top carefully and crimp fold the cheeks to lock.

10. Final shaping for mouth, body and legs.

11. Completed.
